In addition to the interview process, nursing evaluation uses certain techniques to collect information such as observation, auscultation, palpation and percussion. Henry, Norma Jean, Mendy McMichael, Janean Johnson, Agnes DiStasi, Brenda S. Gale's encyclopedia of nursing and allied health. This is especially important in the case of extreme pain. Upper Saddle River, N.J.: Pearson Prentice Hall. Filed from the original (PDF) on 2006-09-24. ^ Schreiber 2016, p. 55-57. Nursing Foundations: Clinical Care and Judgment. If there is an urgent need for a focused assessment, the most obvious or troubling complaint will be addressed first. In some cases, nursing evaluation will not incorporate the patient's historical and interview if the prioritization indicates that immediate action to preserve breathing, breathing and circulation is urgent. Nurses should be aware of the many factors that can influence the overall experience of the patient and the expression of pain, and these should be considered during the evaluation process. ^ Bates 1995, p. 17. Filadelfia: Lippincott. ISBN 978-1-4511-8561-4 Townsend, Mary (2015). Manual of nursing diagnosis : an evidence-based guide to care planning. University Hospital of South Manchester. Barts and City University of London. ATI Nursing Education. The need for an evaluation of health is always included in any psychological examination to exclude structural damage or anomalies. MEDSURG Nursing (MEDSURG NURS), Jan/Feb 2016; 25(1): 55A-57. These include: [17] the index of independence in the activities of daily life, [18] the Barthel Index, [19] the Crighton Royal behavior classification scale, [20] the Clifton assessment procedures for the elderly, [21]
